

Date: 4/26/2021

Dear Yetti Owner,

Thank you for purchasing a Yetti. We hope that you are enjoying your unit and are truly creating your own legend with it.

We have been made aware of an issue with interior's built by Nelson Industries. In certain conditions an electrical short circuit may occur within the units electrical system.

Please see the attached Technical Service Bulletin for complete details and photo examples.

If you would like to receive this free service kit/part, please contact:
Voyager Industries, Inc at 1-800-980-4940 and reference the Yetti TSB# 015

We apologize for any inconvenience this may cause.

Regards,

Team Yetti

Factory Authorized Repair

Title: Unprotected 12v floor mounted stud terminal

TSB - 015

Models: All 2020-2021 Yetti's with interior's built by Nelson Industries

Introduction: In certain conditions Yetti units finished by Nelson Industries may develop an electrical short circuit due to an unprotected electrical stud connection

Issue: An unprotected 12v floor mounted stud terminal may allow accidental grounding of this positive circuit. Voyager Industries recommends that customers with units with this condition protect the stud terminal with the free protective cover.

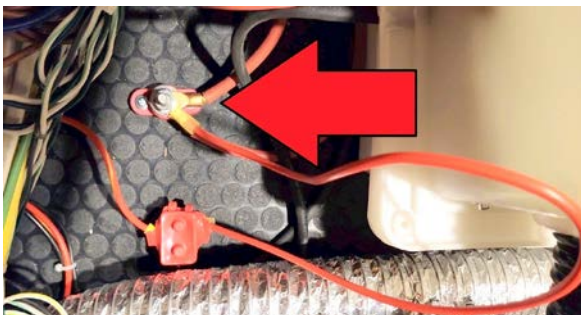

Applicable Units: All Yetti's with interior's built by Nelson Industries between the years of 2020 – 2021.

10 th Digit of VIN #	Model Year
L	2020
M	2021

Action: Customers may choose to Install the protective cap onto the stud terminal themselves by requesting a free of charge service kit #51869 ELEC-TERMINAL COVER.

Warranty Process: Customers may contact a Yetti dealer of their choice and arrange for a warranty service appointment to have the cap installed. Dealer may submit a warranty service invoice to Voyager Industries.

There are many variations of how the electrical systems were installed. This shows the stud terminal in its most common position. If you are uncomfortable performing this installation, please feel free to contact the closest dealer and schedule a service appointment.

In this photo the red arrow points to the positive terminal post for the Yetti's 12-volt system. This connects directly to the positive terminal on the battery on most 2020 – 2021 units with interiors installed by Nelson Industries.
